Group 4 Contribution Journal

ITAI 2376 | Diffusion Models Midterm

James Delgado

James worked on the diffusion notebook, including dataset preparation, U-Net components, training, image generation, and CLIP evaluation. He also documented and debugged the notebook.

Esther Odaibo

Esther prepared the assessment report covering diffusion, architecture, training results, CLIP evaluation, and practical applications. She used the saved notebook results and figures to discuss strengths, limitations, and possible improvements.

King Owusu

King prepared assessment answers and the observations and analysis sections, including interpretation of the loss curves, class conditioning, generated images, and CLIP scores.

Zain Ahmed

I handled the final documentation review and helped organize the materials for submission. I collected the team's notebook, assessment report, contribution journal, and reflection journal, and prepared the PDF files in one package. I checked the files against the assignment requirements and reviewed the notebook's saved training results and generated images. I noticed that the loss improved even though some images did not match the requested digits. I also flagged that the notebook contained saved outputs without recorded cell execution counts. I took responsibility for setting up the GitHub repository, organizing the four PDFs, and preparing the repository link for the Canvas submission. My work focused on making the team's project easier to review and submit.
